1. Proof load of bolts is the load the bolt must support in axial tension Without permanent deformation.
 2. Tensile strenght of bolt is the minimum load the bolt must support in Axial tension without failure of the bolt.
 3. Proof load of nuts is the load the nut must support axially without Evidence of thread stripping or rupture.

Rendement et durabilité augmentent de façon marquée durant le procédé de fabrication à froid de l'acier inoxydable. Les données et chiffres ci-dessous sont approximatifs et sont en fait plus élevés que ce qui est démontré.

Tensile, yield and hardness increase sharply during cold-formed manufacturing of stainless.

Figures below are approximate and are often much higher than shown.

Tension / Tensile - 100 000 – 125 000 psi

Rendement / Yield - 55 000 – 75 000 psi

Durabilité / Hardness - 100 Rockwell B

Imperméabilité magnétique / Magnetic permeability – 2.0 max.

SI LE PRODUIT EST FABRIQUÉ D'ACIER INOXYDABLE, IL EST NORMALEMENT DU TYPE A OU DU TYPE B ET NON DU TYPE AB.

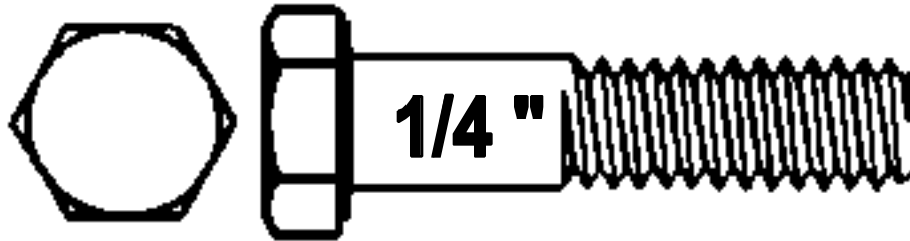

STAINLESS SHEET METAL SCREWS ARE NORMALLY TYPE A OR TYPE B, NOT TYPE AB

SPLIT POINT

- * Un angle de coupe extra sur les deux pointes de coupe.
- * Pointe fendue est désignée ici en noir.
- * Le terme "pointe fendue " est de façon populaire réservé pour les mèches 135° acier rapide.

-
- * An extra cutting angle on the 2 cutting edges of a drill bit.
 - * Split Point is designated here in black.
 - * Split Pointing is almost always reserved for 135° HSS drill bits.

- * Les mèches 118° sont pour usage général.
- * Les mèches 118° ont tendance à glisser sur la surface si le matériel n'est pas poinçonné.

- * 118° drill bits have a sharp point and are common on standard / general purpose drill bits where light duty work is needed. Because of this sharp point, 118° drill bits will tend to " walk" or spin like a top on flat surfaces.
- This is why a centering drill or center punch is normally used to start off holes.
- If the operator has very steady hands, them the 118° drill bit can be used without center punching.

- * Les mèches 135° percent plus de trous.
- * Elles percent plus rapidement et ne glissent pas.

- * 135° drill bits have a flatter point which gives the drill bit more cutting surface area. When more surface area cuts the steel, drilling is faster.
